

Project Report

Project Title: Multi-Step Loan Application

Problem Statement

This project implements a browser-based multi-step loan application form with validation, conditional fields, document upload, e-signature capture, auto-save, and a summary/pre-approval stage.

Features

- Multi-step wizard form
- Real-time validation for PAN, Aadhaar, email, phone, postal code
- Conditional loan fields for personal, home, and business loans
- Document upload with drag & drop
- Canvas-based e-signature capture
- Auto-save and resume via browser localStorage
- Final application summary and pre-approval display

Tech Stack

- XHTML
- CSS
- JavaScript
- Browser localStorage

How It Works (Flow)

1. Choose loan type
2. Enter personal information
3. Provide address details
4. Enter loan details and conditional home/business fields
5. Provide employment/business information
6. Upload required documents
7. Sign using the canvas e-signature field
8. View summary and submit the application

Run Instructions

How to run: Open loan-app.xhtml in a modern browser. No server setup required. The UI and logic are entirely client-side. Screenshots are included above.
